Lithics Lab 10-13-94

Shift back to obsidian at 7:00 p.m. Reposition at square B8 C9.

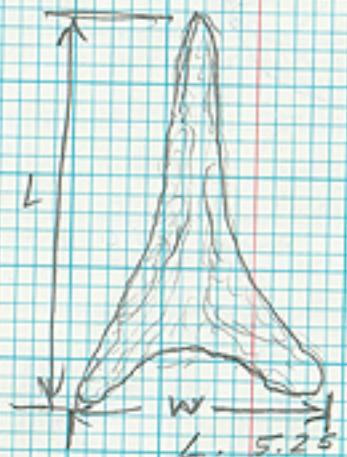
75 gram starting weight.

Core fragment produced about a month ago during initial flintknapping workshop. This piece breaks in a shape unusable for intended projectile point preform.

+ shift to another obsidian flake — unweighed. This flake

10-17-94

in turn results in the production of an obsidian drill. Have difficulty getting bulbar ridge from lower stem area.



Final 8.9 grams of obsidian (Rainbow obsidian At position B8 C9.

L. 5.25 cm.
W. 3.55 cm. (base)
T. 1.2 cm. (base)

Because I worked on my knees, with knees at B8 and C9 respectively, I produced a triangular pattern of debitage. In addition to the drill, I produced some lengthy
